Keyboard Maestro Tutorials

SUMMARY

I use Keyboard Maestro to create macros on my Mac. It helps me streamline common and everyday tasks, e.g., enter the dates on files, name documents, and write email salutations. However, it is also much more powerful, and you can set it to usefully interact with specific applications (e.g. Microsoft Office) or devices (e.g., an external hard drive). In what follows, I link to some great tutorials I found that help me get the most out of KM.

TUTORIALS
